

Drinking Water

The Accu-Tab® system by PPG Industries combines uniquely designed patented chlorinators with slow release 68% calcium hypochlorite to provide one complete system for tablet chlorination. Many public and private water systems are choosing the Accu-Tab system to replace traditional sodium hypochlorite bleach and gas systems. The Accu-Tab system can be used in essentially any clean-process water stream where controlled chlorine is needed as a biocide or sanitizer.

Why choose the Accu-Tab system?

- Chlorine delivery is accurate, plus it reaches the ends of the distribution system
- Less odor and taste complaints
- Safety of public and municipal personnel
- Simple installation and low maintenance
- Product transportation simply involves one person and non-poisonous placarding
- Reduced vulnerability and risk management plans

Accu-Tab system applications (from 0.1 to 20 mgd):

- Well water
- Pre- and post-chlorination
- Booster stations
- Supplement to UV
- Backup to chlorine alternatives

The Accu-Tab system is certified:

- Accu-Tab Chlorinators are NSF 61 listed as drinking water system components
- Accu-Tab tablets are NSF 60 listed as drinking water treatment chemicals
