

| TYPE OF PRODUCT | DESCRIPTION | PRODUCT CODES | RECOMMENDED USES | COLORS |
|-------------------------------------|--|---------------------|--|---|
| Self-Leveling Systems | MegaSeal SL – Self-Leveling Epoxies | 99-126 Series | Laboratories, production facilities, warehouses, food and beverage processing plants, hangars | Haze Gray, Deck Gray, Tile Red, Sandstone, White, Clear |
| | MegaSeal HDSL – Heavy Duty Self-Leveling Epoxies | 99-120 Series | Industrial and commercial warehouses, food and beverage processing plants, water/wastewater facilities, pharmaceutical plants | Medium Gray, Pearl Gray, Ivory |
| | MegaSeal SL – Tintable Self-Leveling | 99-6650 and 99-6652 | Laboratories, production facilities, warehouses, food and beverage processing plants, hangars | Tint Bases |
| Thin Film System | MegaSeal TF – Thin Film | 99-10 Series | Warehouses, clean rooms, mechanical rooms, production areas | Gray, Dark Gray, White, Safety Red, Safety Yellow, Tint Bases |
| Topcoat/Finish System | MegaSeal HPU – High Performance Urethane | 99-19 Series | Laboratories, production facilities, warehouses, food and beverage processing plants, hangars | Clear, Pearl Gray, White, Tint Bases |
| Primer/Sealer Systems | MegaSeal HSPC – High Solids Primer | 99-127 Series | Primer coat for laboratories, production facilities, warehouses, food and beverage processing plants, water/wastewater plants | Clear, Gray |
| | MegaSeal WBPC – Waterborne Primer | 99-128 Series | Primer coat for laboratories, production facilities, warehouses, food and beverage processing plants | Clear |
| Patching/Repair Systems | MegaSeal CF – Crack Filler | 99-114 Series | Fill in cracks, holes and voids. | White |
| | MegaSeal CR – Concrete Repair | 99-965 Series | Repair concrete or repitch floors for proper draining | Gray |
| Resurfacer System | MegaSeal RS – Resurfacer | 99-6820 Series | Trowel applied for new and old concrete floors | Gray |
| Secondary Containment System | MegaSeal SC/HSN – Secondary Containment/Novolac | 99-29 Series | Chemical processing, hazardous materials storage, secondary containment | Gray |
| Non-Skid Systems | MegaSeal NSP – Pedestrian Grade Non-Skid | 99-6511 Series | High pedestrian traffic areas such as walkways and ramps. Light duty safety coating for plant floors or stairways. Applicable for residential use. | Gray, Red, Black, Yellow |
| | MegaSeal NSE – Heavy Duty Non-Skid | 99-138 Series | Service and loading areas, vehicular ramps and decks, platforms | Dark Gray |

PROFESSIONAL GRADE

PPG's MegaSeal Flooring Systems

offer best-in-class floor coatings.

It is the product line that architects,

contractors, and specification

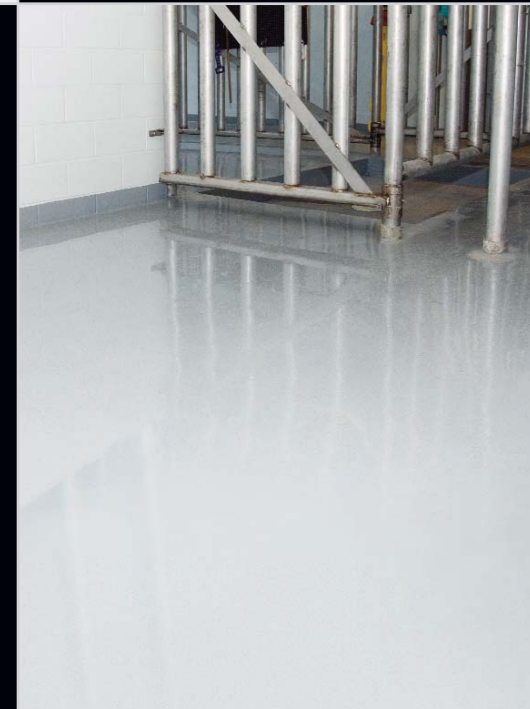

professionals choose first.

PPG PROTECTIVE AND MARINE COATINGS

offers a broad line of high performance coatings and finishes for use in the most demanding floor applications. The MegaSeal Flooring Systems are the choice of architects, contractors, and specification professionals worldwide. MegaSeal protects concrete floors where superior durability is mandatory—food & beverage processing plants, manufacturing and chemical facilities, laboratories, airplane hangars, warehouses, shopping malls, and casinos. MegaSeal's product line includes: self-leveling, chemically resistant, decorative, anti-slip, and floor preparation products.

MegaSeal Flooring Systems are professional grade and have been designed to withstand impact, abrasion, and/or chemical exposure without sacrificing functional or decorative performance. These tough working products are easy to install and provide superior protection for both new construction and renovation projects.

MEGASEAL SELF-LEVELING FLOOR COATINGS

MegaSeal SL 99-126 Series – 100% solids, two-component self-leveling floor coating

A high performance coating that provides a durable, seamless, high-gloss surface. This recoatable epoxy system can also be applied with an anti-slip texture or decorative flakes and quartz, resulting in a functional yet attractive finish.

The 99-126 Series comes in the following ready-made colors: haze gray, deck gray, clear, sandstone, tile red, and white. Standard and fast-set cures are available.

MegaSeal SL Tint 99-6650 Series – 100% solids, two-component, tintable self-leveling floor coating

This extension of the self-leveling product line was specifically designed to allow for tinting in order to match your customized color needs. This product has the same high performance characteristics of the ready-made color, self-leveling products.

MegaSeal HDSL 99-120 Series – 100% solids, heavy-duty self-leveling surfacer

This three-component system spreads out smoothly and can deliver a film build up to 150 mils for maximum concrete protection. This coating is ideal for food and beverage processing, laboratories, water/wastewater facilities, and heavy industrial warehouses.

MEGASEAL PRIMERS, SEALERS, AND REPAIR

MegaSeal HSPC 99-127 Series – 100% solids, low-viscosity epoxy primer

This deep-penetrating epoxy primer seals porous concrete, creating an ideal primed layer that enhances the adhesion of the self-leveling epoxy, as well as reduces pinholes and bubbling that may occur. This easy-to-apply primer is recommended for new and weathered concrete.

MegaSeal WBPC 99-128 Series – clear, water-based epoxy primer

This low-odor primer offers excellent adhesion to acid-etched concrete. It is suitable for thin film applications where up to 4 mils can be applied.

MegaSeal CF 99-114 Series – 100% solids epoxy filler

An excellent high-solids epoxy for filling voids, holes, and surface discontinuities up to 1" across. It provides a smooth surface in a single application.

MegaSeal CR 99-965 Series – acrylic modified cement

Perfect product to repair deteriorated concrete or to repitch floors for proper drainage. This product can be used in varying thicknesses and troweled down to a feather edge.

MEGASEAL FINISH COATINGS

MegaSeal HPU 99-19 Series – high performance urethane

This low-VOC polyurethane topcoat can be used to provide an extremely attractive finish with excellent color and gloss retention year after year. It can be applied over each of the MegaSeal self-leveling products, offering additional stain and abrasion resistance.

PSX® TECHNOLOGY

Leveraging technology across PPG's coatings family, the MegaSeal product line proudly recommends the revolutionary engineered siloxane coating – PSX® – as a complimenting product. PSX® is PPG's patented technology that offers the adhesion and corrosion resistance of epoxies and the gloss and abrasion resistance of polyurethanes.

PSX® 700 – engineered siloxane topcoat

This high-solids, VOC-compliant topcoat is ideal where aesthetics and durability matter. It is virtually impervious to hot tire pick-up and chemical splashes or spills. It offers an extremely short downtime with six to eight hours to traffic at 70°F and an indefinite recoat window.

MEGASEAL DECORATIVE AND ANTI-SLIP PRODUCTS

MegaSeal QTZ 99-840 Series – quartz additive

Quartz additive provides the perfect decorative look to your surroundings when broadcasted directly into the self-leveling coating. The finished look is often compared to tile or granite.

MegaSeal FLK 99-841 Series – flake additive

Flake additive provides the ideal accent to your floors. A light broadcast of a solid or blended color scheme can really improve the aesthetics of a large floor space.

MegaSeal NSP 99-6511 Series – one-component, pedestrian grade, anti-slip

This one-component epoxy is designed for areas of heavy pedestrian traffic with easy application to concrete, metal, and wood surfaces. Colors include gray, black, red, and yellow.
